Heteromeles arbutifolia

Toyon

Toyon is a California native evergreen shrub that grows 8'-15' high and spreading 8'. It has leathery, toothed, green leaves. Small, white, fragrant flowers appear in late spring or early summer, followed by clusters of red winter berries. It tolerates full sun or partial shade, heat, smog, wind and heavy or light soils. Established plants are drought tolerant. It may take several years for plant to be established; at that point, it's great for erosion control.
